

In Uppsala university hospital (1000 beds) we did the following:

- Intranet - information about PU and what is ongoing in the hospital (links to Stop PU day - film and a 15 min education about PU prevention)

725 staff had read it (klicked)

A quiz with 7 questions on the intranet was completed by 421 staff.

We had information about PU on all 24 TV screens in the open clinics

We had a press release and there were a short report on local radio

All patients (700 adult somatic) got an information leaflets the lunch tray (recommendations - what can the patient do by himself to prevent PU).
